SUMMARY

US-educated full-stack developer building production web and mobile apps with ASP.NET Core, C#, SQL Server, and Flutter. Recent work includes a multi-tenant REST API and a cross-platform patient app, both on a clean, JWT-secured architecture. Comfortable owning features end-to-end, from EF Core data models to the mobile client.

Skills:

Languages: C++, C, Dart, SQL, C#
Frameworks & Platforms: ASP.NET Core MVC, Flutter, ASP.NET Core Web API
Mobile Development: Flutter, Dart, Riverpod, Cross-Platform IOS & Android
Frontend: HTML, CSS, Razor
Backend: REST APIs, JWT Authentication, LINQ, Dependency Injection, Repository Pattern, Entity Framework Core
Tools & Version Control: Git, Linux, Docker, Figma, SQL Server
Architecture: Clean Architecture, MVC, Service Layer Pattern, Modular Design

PROJECTS

PhysioLink - Physiotherapy Management Mobile Application https://github.com/faresibrahim/physiolink
Flutter, ASP.NET Core Web API, Entity Framework Core, SQL Server | 2025–2026

- Built a cross-platform Flutter patient app (Riverpod, GoRouter, Dio, Freezed) with secure JWT authentication, automatic refresh-token retry on 401, assigned-exercise tracking, video exercise guides, and feedback submission.
- Engineered a multi-tenant ASP.NET Core REST API on Clean Architecture with JWT auth, role-based authorization (Patient / ClinicAdmin), and per-clinic data isolation via EF Core global query filters driven by JWT claims; deployed to Railway with PostgreSQL via a Dockerized pipeline.
- Developed an ASP.NET Core MVC admin panel for clinic management — therapist profiles, patient enrollment, exercise assignment, and appointment scheduling — consuming the API through an IHttpClientFactory client with HttpOnly cookie-based JWT sessions.

Maqam – Full-Stack E-commerce Web Application https://github.com/faresibrahim/maqam-ecommerce-website
Programmer | ASP.NET Core MVC, C#, SQL Server | 2026

- Built a full-stack e-commerce app in ASP.NET Core MVC with product catalog, category filtering, and inventory management.
- Implemented a shopping cart and checkout workflow handling cart state, order creation, and transactions via Entity Framework Core, with a Repository pattern and DI across products, orders, cart, and stock.
- Integrated ASP.NET Identity for secure accounts, order history, and role-based admin access.

EXPERIENCE

Digital Systems Developer – CDG Company | Apr 2025–Present

- Built internal business apps in AppSheet backed by structured Google Sheets with defined data relationships.
- Integrated the Google Drive API to centralize document management and automate file organization.
- Maintained the company's WordPress site on DigitalOcean and provided software/hardware support, debugging production systems and coordinating fixes with stakeholders.

Research Assistant – University of Michigan-Flint | Nov 2023–April 2024

- Developed and maintained an open-source Chrome extension, delivering feature enhancements and bug fixes using JavaScript.
- Collaborated with team members on feature planning, usability improvements, and technical decisions.
- Assisted in testing, debugging, and validating application behavior across different environments

EDUCATION

University of Michigan-Flint **B.S. in Computer Science** Graduated April 2024

CERTIFICATIONS AND TRAINING

Flutter Development Course – **Hope Academy**
Full Stack Training Course - **PalSoft Company**
